The **R433A** is a true one-port, surface-acoustic-wave (**SAW**) resonator in a low-profile metal **TO-39** case. It provides reliable, fundamental-mode, quartz frequency stabilization i.e. in transmitters or local oscillators operating at **433.920** MHz.

## 1. Package Dimension (TO-39)

# 2. Marking

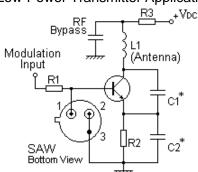

# R433A or 433.920

Ink Marking

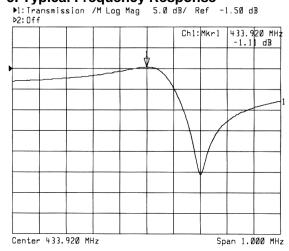

Color: Black or Blue

# 4. Typical Application Circuits

1) Low-Power Transmitter Application

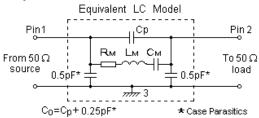

## 5. Typical Frequency Response

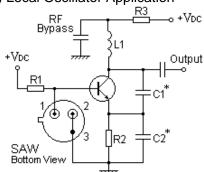

# Pin Configuration 1 Input / Output 2 Output / Input 3 Case Ground

| Dimension | Data (unit: mm) |  |  |  |
|-----------|-----------------|--|--|--|
| А         | 9.15±0.20       |  |  |  |
| В         | 5.08±0.20       |  |  |  |
| С         | 3.30±0.20       |  |  |  |
| D         | 3±0.20/5±0.20   |  |  |  |
| E         | 0.45±0.10       |  |  |  |

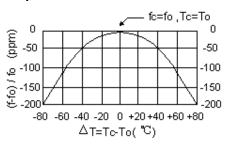

#### 3. Equivalent LC Model and Test Circuit

## 2) Local Oscillator Application

## 6. Temperature Characteristics

The curve shown above accounts for resonator contribution only and does not include oscillator temperature characteristics.

#### 7. Performance

#### 7-1.Maximum Ratings

| Rating                          | Value          | Unit       |            |
|---------------------------------|----------------|------------|------------|
| CW RF Power Dissipation         | Р              | 0          | dBm        |
| DC Voltage Between Any two Pins | $V_{ m DC}$    | ±30        | V          |
| Storage Temperature Range       | $T_{ m stg}$   | -40 to +85 | $^{\circ}$ |
| Operating Temperature Range     | T <sub>A</sub> | -10 to +60 | $^{\circ}$ |

#### 7-2. Electronic Characteristics

|  | Characteristic                    | Sym            | Minimum | Typical | Maximum | Unit       |
|--|-----------------------------------|----------------|---------|---------|---------|------------|
| Center Frequency<br>(+25°C)                          | Absolute Frequency                | fc             | 433.845 |         | 433.995 | MHz        |
|  | Tolerance from 433.920 MHz        | $\Delta f_{C}$ |         | ±75     |         | kHz        |
| Insertion Loss                                       |                                   | IL             |         | 1.5     | 2.2     | dB         |
| Quality Factor                                       | Unloaded Q                        | Q <sub>U</sub> |         | 11,600  |         |            |
|  | 50 Ω Loaded Q                     | QL             |         | 1,850   |         |            |
| Temperature<br>Stability                             | Turnover Temperature              | T <sub>0</sub> | 25      |         | 55      | $^{\circ}$ |
|  | Turnover Frequency                | f <sub>0</sub> |         | fc      |         | kHz        |
|  | Frequency Temperature Coefficient | FTC            |         | 0.032   |         | ppm/°C²    |
| Frequency Aging Absolute Value during the First Year |                                   | f <sub>A</sub> |         | ≤10     |         | ppm/yr     |
| DC Insulation Resistance Between Any Two Pins        |                                   |                | 1.0     |         |         | ΜΩ         |
| RF Equivalent<br>RLC Model                           | Motional Resistance               | R <sub>M</sub> |         | 19      | 29      | Ω          |
|  | Motional Inductance               | L <sub>M</sub> |         | 80.7885 |         | μН         |
|  | Motional Capacitance              | См             |         | 1.6669  |         | fF         |
|  | Pin 1 to Pin 2 Static Capacitance | C <sub>0</sub> | 1.65    | 1.95    | 2.25    | pF         |

(i) CAUTION: Electrostatic Sensitive Device. Observe precautions for handling!

## © TRANSCEND 2003. All Rights Reserved.

- 1. The center frequency,  $f_C$ , is measured at the minimum IL point with the resonator in the  $50\Omega$  test system.
- 2. Unless noted otherwise, case temperature  $T_C = +25^{\circ}C \pm 2^{\circ}C$ .
- 3. Frequency aging is the change in f<sub>C</sub> with time and is specified at +65°C or less. Aging may exceed the specification for prolonged temperatures above +65°C. Typically, aging is greatest the first year after manufacture, decreasing in subsequent years.
- 4. Turnover temperature,  $T_0$ , is the temperature of maximum (or turnover) frequency,  $f_0$ . The nominal frequency at any case temperature,  $T_C$ , may be calculated from:  $f = f_0 [1 FTC (T_0 T_C)^2]$ .
- 5. This equivalent RLC model approximates resonator performance near the resonant frequency and is provided for reference only. The capacitance C<sub>0</sub> is the measured static (nonmotional) capacitance between Pin1 and Pin2. The measurement includes case parasitic capacitance.
- 6. Derived mathematically from one or more of the following directly measured parameters: f<sub>C</sub>, IL, 3 dB bandwidth, f<sub>C</sub> versus T<sub>C</sub>, and C<sub>0</sub>.
- The specifications of this device are based on the test circuit shown above and subject to change or obsolescence without notice.
- Typically, equipment utilizing this device requires emissions testing and government approval, which is the responsibility of the equipment manufacturer.
- Our liability is only assumed for the Surface Acoustic Wave (SAW) component(s) per se, not for applications, processes and circuits implemented within components or assemblies.
